

THE RIGHT CHOICE

MISTRAL

Pacific Dairy now offers you a good alternative to lime (dehydrated). It is a product from France called Mistral. We all know environmental pathogens are a major cause of Mastitis and Somatic Cell Counts. They require moisture to survive. The pathogens enter the teat canal when the teat ends come in contact with wet surfaces. Mistral absorbs moisture and other fluids in stalls, bedding, mats, maternity pens and calf pens. This reduces the amount of pathogens present. Its claim to fame is moisture absorption, non-corrosiveness, ammonia gas prevention, ability to repel flies and aid in getting a fresher smelling barn.

Contents are:

- * Seaweed Concentrate.
- * Mineral Absorbent.
- * Alginates
- * Trace Minerals.
- * Vegetable Absorbents.
- * Essential Oils.

MOOS AND BOOZE

After earning his science degree in 2009, Garren Visser dedicated himself to his passion project: distilling lactose and whey into alcohol. Visser hit on the perfect recipe, and when he found a partner in New Zealand willing to produce it, Milk Money Vodka was born. The clear liquid is 40% alcohol and bottled in a sleek vessel reminiscent of an old milk bottle. Milk Money Vodka is "sweet with a smooth finish" says Visser. For now it is available in Visser's home state of New Mexico, but he hopes to expand his markets soon. Vodka equals Mooka.

UTRESEPT (OMRI STATUS)

Utresept is a long time product sold by Pacific Dairy since 1999. This is a prophylactic program to maintain and restore reproductive capacity while avoiding antibiotic residues in milk and meat. The use of Utresept will not irritate the uterine lining and there is no withdrawal of

milk incurred. Utresept is all-natural and organic in origin. Its strength is due to a synergistic action by a reaction between natural organic acids and natural sugars. It keeps on working well after treatment.

Can be used:

- After Calving.
- As a prophylactic.
- For a cow that has cleaned but has an odor.
- Pre-Breeding.
- Post-Breeding.
- Retained Placenta.
- Freshened cow with Udder Oedema.
- A cow that requires prostaglandin for cleaning.
- For a cow that is difficult to get into calf.
- For an inseminated cow showing cloudy mucous.
- Deep Cows with long cervixes.

SWISS COWBELLS

One of Switzerland's most enduring and endearing cultural icons, the cow bell, is under threat from animal rights activists who say it is causing bovine deafness. Researchers at the Swiss Federal Institute of Technology in Zurich said the bells which weigh up to 5.5 kgs, can reach noise levels of 113 Decibels - equivalent to a chainsaw. Cows have more sensitive hearing than humans and scientists fear the constant noise of the bells is also affecting their feeding behavior. A spokeswoman for Swiss Tourism said the country would survive this cow mountain image and would actually be quieter in the Alps, which is what some people would like also.

AIR BLOW OUT

We now offer a good alternative to Engine Trailer Air Compressors for farm use. The problem with the engine air compressors is that they are too expensive to buy new, used ones are hard to find and you end up with another motor on the yard. Our new

PTO compressors generate 340 CFM at 40 PSI at 600 RPM. We can mount it on a pump or free stand it on wheels. Super handy for blowing out drag lines, supply lines or almost anything. Air is becoming the better way to clean almost anything, including rads or even milk tank compressors.

GMO - MILK

More consumers are buying organic to avoid GMO. Avoiding GMO's for themselves or their children is an increasingly important reason why parents choose organic food according to the Organic Trade Associations US Families Organic Attitudes and Beliefs 2014 Tracking Study. Almost 25% of parents buying organic said that wanting to steer clear of genetically modified foods is now one of their top reasons for selecting organic - the most in the four years that the survey has been taken. Of the 15 reasons for buying organic - the not buying GMO reason showed the biggest jump by far from attitudes a year ago.

PDC HAPPENINGS

*Jim Peters and Richard Siebring both just completed a two part course at Cornell Pump Manufacturing plant in Portland, Oregon. There were people from all over the world at this event. The information taught will be invaluable in the field.

*Garry and Kathy Franz just attended Mueller Milk Tank sales meeting in Springfield, Missouri. Learning the latest in milk cooling with dealers from all over Canada and the US while experiencing good Ozark hospitality. US Sales of Milk Tanks are in record numbers. New tank lead times are up to 8 weeks for delivery.

*Chris Hollaar has completed his Crane certification. We now have 3 employees who can operate cranes safely.

WHAT IF YOU COULD GET A PARLOUR THAT:

- ⇒ Puts the teat cups on by itself.
- ⇒ One Step attachment process.
- ⇒ 15 Seconds average attachment for all 4 teats.
- ⇒ Stays on the cow for complete process.
- ⇒ Once on it gives you 100% teat cleaning.
- ⇒ In the prep, no milk leaves the teat in the cleansing process.
- ⇒ Has no prep liquid getting into the milk stream.
- ⇒ Is able to re-hang teat cup in the event of a kickoff.
- ⇒ Uses 3-D military Real Time camera to catch a moving teat.
- ⇒ Has the ability to milk manually.
- ⇒ Is built for easy servicing using component parts for quick service.
- ⇒ Uses the same arm as Mlone Box Robots.
- ⇒ Uses an “In Liner” Teat cleansing process.
- ⇒ Automatically rejects the first jets of milk while stimulating teats.
- ⇒ Uses Stimupuls Pulsation for added stimulation.
- ⇒ Does the teat Spray in the liner for perfect teat coverage.
- ⇒ Milks into a low line using a proven meter.
- ⇒ Gives the same turns per hour as a human ran parlour.
- ⇒ Designed initially for rotary parlour.
- ⇒ Allows all free stall barn routines to stay the same.
